

## IN THE CLAIMS

Note: The Amendment dated April 25, 2012 was NOT entered, and therefore the Amendments presented herein are with respect to the claims pending on Appeal.

### Claims 1-154 (Cancelled)

155. (Currently Amended) A method for selecting media, comprising ~~the steps of:~~  
persistently storing data describing available media and persistently storing data  
representing previously selected media, selected prior to a current selection;

automatically performing a search of said available media for a correspondence to data  
representing automatically extracted content characteristics of the previously selected media,  
wherein said data representing automatically extracted content characteristics are not received as  
through an input from a human user; and

automatically issuing a notification of available media having characteristics  
corresponding to, but not identical to previously selected media,  
wherein said media comprises a media program.

156. (Previously Presented) The method of claim 155 wherein said media  
comprises television programs and said data describing available media comprises a channel  
guide list comprising content characteristics.

157. (Currently Amended) The method of claim 155, wherein said ~~step of~~  
automatically issuing a notification ~~includes the step of~~ comprises producing a display including  
a list of the available media meeting a predetermined correspondence criteria of the data  
representing automatically extracted content characteristics of the previously selected media and  
data describing available media on a display screen for viewing.

158. (Currently Amended) The method of claim 157, further comprising ~~a step of~~  
altering the produced display in dependence on at least input received from a data entry device.

159. (Currently Amended) The method of claim 158, further comprising ~~the step of~~ selecting one of the available media items displayed on the list of available media.

160. (Currently Amended) The method of claim 155, wherein said data representing automatically extracted content ~~said~~ characteristics of previously selected media comprises a media theme ~~information~~.

161. (Currently Amended) The method of claim 155, further comprising ~~the step of~~ displaying a list of available programs, and receiving an input for recording a selected one of the available programs.

162. (Previously Presented) A system, comprising:  
a controller component configured to control delivery of a media program; and  
a processor component configured to automatically determine a correspondence between data representing content characteristics of media within a set of available media programs with data representing content characteristics of previously delivered media, wherein said data representing content characteristics are not received as input from a human user, and producing a signal dependent on a degree of said correspondence.

163. (Previously Presented) The system according to claim 162, wherein said signal controls a recording of a media program.

164. (Previously Presented) The system according to claim 162, wherein said signal produces a list of choices through a human user interface.

165. (Previously Presented) The system according to claim 162, wherein interaction with said system through a user interface serves as an input to an adaptive algorithm of said processor component for determining said correspondence.

166. (Previously Presented) The system according to claim 162, wherein said at least one memory further stores information regarding at least two humans, wherein said signal is dependent on a defined set of humans.

167. (Previously Presented) The system according to claim 162, wherein a presentation of media is restricted in dependence on a financial transaction.

168. (Previously Presented) A system for selecting media items, comprising:

- (a) a user interface for receiving a selection of a media item and for delivering a response to the selection;
- (b) a processor for automatically searching media items available for selection and for presenting a recommendation of at least one available media item, based on a degree of correspondence of said selection and content characteristics of available media items input independently of a human user; and
- (c) an accounting database for recording commercial transaction data relating to selections received.

169. (Previously Presented) The system of claim 168, wherein said media items comprise television programs and said stored characteristics comprise a channel guide list, and television program-descriptive text accompanies said channel guide list.

170. (Previously Presented) The system of claim 168, wherein said recommendation presented by said processor comprises a display including a list of the available media meeting a predetermined correspondence criteria on a display screen for viewing.

171. (Previously Presented) The system of claim 168, wherein said characteristics comprise an identification of a program type.

172. (Previously Presented) The system according to claim 168, wherein said processor controls a recording of a said media item.

173. (Previously Presented) The system according to claim 168, wherein said database is configured to store a history of selections made by a plurality of users.

174. (Currently Amended) The method according to claim 155, further comprising ~~the step of~~ receiving media programming information as the data representing automatically extracted content characteristics of media.

175. (Previously Presented) The method according to claim 177, further comprising ~~the step of~~ automatically generating ~~the~~ data representing automatically extracted content characteristics of media.

176. (Previously Presented) The method according to claim 155, wherein the data representing automatically extracted content characteristics comprises a description of media content.

177. (Currently Amended) A method for proposing media, comprising ~~the steps of:~~ storing data representing automatically extracted content characteristics of media previously selected, ~~wherein the data representing characteristics of media previously selected are not input by a respective human user;~~

determining a set of available media ~~programs~~, the set being associated with data representing content characteristics of members of the set of available media ~~programs~~;

automatically determining a degree of correspondence between data representing content characteristics of a member of the set of available media ~~programs~~ and the data representing automatically extracted content characteristics of previously selected media; and

outputting an identification of at least one member of the set of available media ~~programs~~ having content characteristics corresponding to automatically extracted content characteristics of previously selected media in dependence on the automatically determined correspondence.

178. (Currently Amended) The method according to claim 177, wherein the identification of at least one member of the set of available media ~~programs~~ having content

characteristics corresponding to the automatically extracted content characteristics of previously selected media is presented as a selectable object in a graphic user interface.

179. (Currently Amended) A method for presenting media, comprising ~~the steps of:~~  
storing data representing at least one content parameter relating prior selections by a respective user, the at least one parameter not being input by that respective user;  
determining a set of available media programs, each member of the set having at least one associated content parameter;  
automatically determining a degree of correspondence of prior selections by the respective user and members of the set of available media programs based on at least the content parameters relating to prior selections by the respective user and the associated content parameters of members of the set of available media programs; and  
outputting a reference to at least one member of the set of available media programs based on at least the automatically determined degree of correspondence.

180. (Previously Presented) The method according to claim 179, wherein the reference comprises an object in a graphic user interface.

181. (Previously Presented) The method according to claim 179, wherein the reference comprises a selectable object in a graphic user interface.

182. (Currently Amended) A method for proposing media, comprising ~~the steps of:~~  
storing data representing content-dependent characteristics of media previously selected by a respective user;  
determining a set of available media, the set being associated with data representing content-dependent characteristics of members of the set of available media;  
automatically determining a degree of correspondence between content-dependent characteristics of available media and content-dependent characteristics of media previously selected by the respective user; and

outputting an identification of at least one member of the set of available media having content-dependent characteristics corresponding to content-dependent characteristics of previously selected media by the respective user.

183. (Currently Amended) A method for selecting media, comprising ~~the steps of:~~  
receiving data describing a plurality of content characteristics of available media;  
defining data representing a plurality of content characteristics of media previously selected by a respective user;  
automatically determining a relation between the available media and the media previously selected by the respective user, based on a respective plurality content characteristics of the available media and media previously selected by the respective user; and  
producing an output in dependence on the automatically determined relation.

184. (Previously Presented) The method according to claim 183, wherein the available media comprises at least one available media program.

185. (Previously Presented) The method according to claim 183, wherein the available media comprises at least one television program.

186. (Previously Presented) The method according to claim 183, wherein the plurality of content characteristics of the available media are derived from an electronic program guide.

187. (Currently Amended) The method according to claim 183, wherein said output comprises a displayed list of hypertext entries representing available media, further comprising ~~the step of~~ receiving a selection of one of the hypertext entries.

188. (Previously Presented) The method according to claim 183, wherein at least one of the plurality of content characteristics of the available media comprises theme information.

189. (Currently Amended) The method according to claim 183, further comprising ~~the step of~~ recording at least one of the available media in dependence on the output.

190. (Currently Amended) The method according to claim 183, further comprising ~~the step of~~ restricting a use of available media in dependence on a financial transaction.

191. (Currently Amended) The method according to claim 183, further comprising ~~the step of~~ financially accounting in dependence on the output.

192. (Currently Amended) The method according to claim 183, further comprising ~~the step of~~ delivering an advertisement in dependence on characteristics of media previously selected by the user.

193. (Currently Amended) The method according to claim 183, further comprising ~~the step of~~ accounting for delivery of an advertisement.
